EDUCATION

University of California, Riverside

Riverside, CA

June 2025

Bachelor of Science

Major in Computer Science

Cumulative GPA: 3.70/4.0; Dean's List 2022-2025; Chancellor's List 2024, 2025

Relevant Coursework: Database Management, Software Engineering, Operating Systems, Algorithms, Artificial Intelligence

Certifications: Google Cloud Fundamentals, Kubernetes Basics, The Basics of Scrum, FinOps

Awards: UCR Programming Contest - Outstanding Female Participant

Leadership: East African Student Association - **President** | National Society of Black Engineers - **Mentor** | National Society of Leadership and Success - **IT Coordinator**

TECHNICAL SKILLS

Data Analysis & Databases: SQL (MySQL, PostgreSQL, NoSQL), Python (Pandas, NumPy), Advanced Excel (Pivot Tables, VLOOKUP, Power Query), ETL, Data Cleaning, Statistical Analysis

Statistical & ML: Scikit-learn, Regression Analysis, K-Means Clustering, LDA Topic Modeling, NLP (Hugging Face Transformers, VADER), A/B Testing, Forecasting

Visualization: Tableau, Matplotlib, Seaborn

Programming & Development: Java, C++, Jupyter Notebook, Git/GitHub, Google Cloud Platform, Agile/Scrum, Kubernetes

WORK EXPERIENCE

Undergraduate Research Intern

UCLA, Los Angeles, CA

June 2024 - August 2024

- Conducted data validation, and reconciliation of large datasets using Python, improving data accuracy by 15% for downstream analysis and reporting.
- Designed interactive Tableau dashboards, saving 10+ hours per week of manual reporting by enabling interactive and reproducible analytics for research staff.
- Applied machine learning techniques (e.g., K-Means clustering) to analyze drug phenotype pathways and generate binary feature matrices for pattern recognition.
- Authored detailed documentation and reports to support process transparency, auditability, and governance.
- Collaborated with cross-functional teams to ensure data quality compliance with research protocols and process standards.

PROJECTS

Amazon Product Performance Analysis | *SQL, Python*

- Analyzed 1,000+ Amazon products across 9 categories using 50+ advanced queries to identify top-performing products and categories.
- Designed a normalized relational database with 3 tables, foreign key relationships, and indexing, reducing query execution time by **80%**.
- Conducted data validation and cleaning using Python and 15+ SQL integrity checks and achieved **99.8%** data completeness, ensuring reliable insights for product strategy.
- Identified high-potential "hidden-gem" products (ratings >4.8+, <50 reviews) with potential **200% projected revenue growth**.

Pricing and Discount Strategy Analysis | *SQL, Tableau, Python*

- Extracted and cleaned 1,300+ product records from MySQL to analyze price tiers, discount effectiveness, and customer ratings using **pandas, Numpy, and SciPy**.
- Conducted **statistical tests (t-test, ANOVA)** revealing that 0-25% discounts significantly improve customer ratings ($p = 0.001$), while discounts above 40% reduced perceived quality.
- Built an **interactive Tableau dashboard** visualizing revenue distribution, discount impact, and key KPIs to enable data-driven pricing strategy insights across five product tiers.

Customer Review & Sentiment Analysis | *Python, NLP*

- Developed an end-to-end NLP pipeline analyzing 1000+ customer reviews using VADER sentiment analysis, achieving **77% accuracy** when validated against product ratings.
- Implemented **LDA topic modeling** to discover 5 key customer discussion themes from unstructured text data.
- Built an **aspect-based sentiment extraction** system covering 7 product dimensions to provide actionable business insights.
- Built a text preprocessing pipeline using **NLTK** and **spaCy** to reduce noise and created visualizations for each result.

Pizza Management System | *Java, PostgreSQL, JDBC*

- Engineered database-driven application with **role based authentication** supporting for 3 user types (customer, driver, manager)
- Designed normalized relational schema with **5+ tables** and foreign key constraints for handling complex order relationships
- Implemented **15+ parameterized SQL** queries for CRUD operations, filtering, transaction management
- Built command-line interface with secure authentication and real-time order processing
