EDUCATION

University of California, Riverside

Riverside, CA

June 2025

Bachelor of Science

Major in Computer Science

Cumulative GPA: 3.70/4.0 | Dean's List (2022-2025) | Chancellor's List (2024, 2025)

Relevant Coursework: Database Management, Artificial Intelligence, Software Engineering, Operating Systems, Algorithms, UNIX system

Certifications: Google Cloud Fundamentals, Kubernetes Basics, The Basics of Scrum, FinOps

Leadership: East African Student Association - **President** | National Society of Black Engineers - **Mentor** | National Society of Leadership and Success - **IT Coordinator**

TECHNICAL SKILLS

Programming & Data Analysis: Python (pandas, NumPy, scikit-learn, NLTK, spaCy), SQL (MySQL, PostgreSQL), C++, JavaScript

Visualization & BI: Tableau, Matplotlib, Seaborn, Looker Studio, Advanced Excel (Pivot Tables, VLOOKUP, Power Query)

Data Analysis & Modeling: Statistical Analysis, Hypothesis Testing, KPI Evaluation, Data Cleaning, Data Annotation, Pattern Recognition, Trend Analysis, Predictive Modeling, A/B Testing

Tools & Infrastructure: Jupyter Notebook, Git/GitHub, ChatGPT, Github Copilot, Claude, Google Cloud Platform, Agile/Scrum

AI & Natural Language Processing: NLP, Intent Classification, Text Analysis, Sentiment Analysis, Topic Modeling (LDA), Feature Engineering, Prompt Engineering

WORK EXPERIENCE

Data Analyst Intern

EcoServants, Remote

November 2025 - Present

- Analyze website traffic and conversion KPIs using Google Analytics to identify friction points in the customer journey and improve user engagement.
- Evaluate Google Ads campaign performance (CTR, CPC, conversion rate) and recommend creative headline optimizations that improve ad efficiency and reduce cost-per-click.
- Design and implement database schema enhancements, including 2+ new SQL tables with foreign key constraints to support distributed community node architecture.
- Develop performance reports and dashboards to monitor campaign effectiveness and engagement trends across digital channels.

Research Assistant Intern

UCLA, Los Angeles, CA

June 2024 - August 2024

- Applied machine learning techniques (e.g., K-Means clustering) to analyze drug phenotype pathways and generate binary feature matrices for pattern recognition.
- Managed and analyzed 100,000+ record datasets using Python and SQL to build structured pipelines and ensure data integrity and reproducible insights.
- Built interactive Tableau dashboards, saving 10+ hours per week of manual reporting by enabling interactive and reproducible analytics for research staff.
- Performed systematic data validation, quality control, and cleaning procedures, improving data accuracy by 15% for downstream analysis.
- Collaborated with research teams to design data collection protocols, ensuring compliance with research standards and documentation.

PROJECTS

Customer Review & Sentiment Analysis | Python, NLP

September 2025

- Developed end-to-end machine learning pipeline to predict customer ratings with 77% accuracy using supervised learning (regression models) and VADER sentiment analysis on 1,000+ text reviews.
- Implemented unsupervised learning (LDA topic modeling) to discover 5 distinct customer discussion themes and performed aspect-based sentiment extraction across 7 product dimensions.
- Validated model performance through cross-validation and created visualizations to communicate predictive insights to stakeholders.

Pricing and Discount Strategy Analysis | SQL, Tableau, Python

September 2025

- Extracted and cleaned 1,300+ product records from MySQL and performed statistical analysis (t-tests, ANOVA) using Excel and Python to evaluate pricing effectiveness across product tiers.
- Discovered that 0-25% discounts significantly improve customer ratings ($p = 0.001$), while discounts above 40% reduced perceived quality.
- Built interactive Tableau dashboard visualizing revenue distribution, discount impact, and KPIs to enable data-driven pricing and inventory decisions.
- Conducted controlled statistical testing to simulate A/B discount strategies and evaluate impact on customer ratings and revenue performance.

Amazon Product Performance Analysis | SQL, Python

October 2025

- Analyzed 1,000+ products across 9 categories using 50+ advanced SQL queries and Excel functions to identify top-performing products and high-potential inventory opportunities with 200% projected revenue growth.
- Designed normalized relational database with indexing, reducing query execution time by 80% to enable faster reporting and analysis.
- Conducted data validation and cleaning using Python and Excel, achieving 99.8% data completeness to ensure reliable insights for merchandising strategy.
